

Purso's general terms (PGT2014)

Term of delivery

FCA Siuro, Incoterms 2010, unless it has been agreed otherwise.

Term of payment

Term of payment according to the agreement.

Packing

The standard package (plastic wrap) is included in the sale price. A separate agreement must be made on any other packing methods.

Drawings

The drawings and models we manufacture are our property, and they may not be copied, handed over or disclosed to a third party without our permission.

Complaints

Any complaints regarding the delivery must be made to Purso within 14 days from receiving the goods, or within 7 days if the matter involves damage that occurred during transport.

Delivery quantity

The minimum extrusion batch for alloys 6063 and 6060 is 250 kg/profile, and for alloys 6082 and 6005 it is min. 500 kg/profile.

An order stated in kilos or metres is considered an approximate value, and the consignment may deviate from what was ordered by plus or minus 10%; however, at least by plus or minus 50 kg (orders of less than 500 kg). When ordering by piece, exceeding the ordered amount by 10% is permitted. A separate agreement must be made on the specific number of pieces.

Tolerances

Normally, tolerances in accordance with SFS-EN 755-9 are applied. Other tolerances may also be applied upon a separate agreement.

Material certificates

Agreement on the material certificates required must be made in connection with the order at the latest.

Delivery lengths

The normal delivery length is 3–8 m. The cutting accuracy is in accordance with SFS-EN 755-9. NOTE! The longest profile cutting length 16 metres.

Anodised and painted profiles

Contact marks remain at the ends and sides of the profiles. If the profile will be anodised later, this must be stated during the order phase.

Storing painted, anodised and untreated profiles

An anodised profile waiting in its transport

package for installation or end use is stored protected from rain as well as mechanical damage in a dry area. The profile package must not be wet or exposed to humidity.

Caring for painted, anodised and untreated surfaces

The surfaces are cleaned and inspected at least once every 12 months: Washing with a neutral (pH approx. 5–8) synthetic detergent solution followed by rinsing with clean water at room temperature. Strong basic or alkaline cleaning detergents may not be used either.

Extrusion dies

The customer is responsible for any possible patent violation or design right infringement in profiles that have been ordered in accordance with a model or drawing. The extrusion dies are owned by the seller and they will be destroyed after three (3) years from the last manufacture. Upon a written request by the customer and at the customer's cost, the dies can be stored for a longer period. The customer is not entitled to any compensation for the destroyed dies.

The extrusion dies are only used upon the customer's order. The customer has no other rights to determine what is done with the dies. All of the customer's rights to the extrusion dies will be terminated if the customer enters into reorganisation proceedings or if the customer is declared bankrupt or placed into liquidation.

We cannot give a binding time of delivery for the first delivery of a new product/die because a new extrusion die always requires one or more test runs and possible repairs to ensure its functionality.

Retention of ownership

Purso retains ownership of the products until the customer has paid the purchase price in full. The customer must store the products so that they can be separated from the customer's property.

Force majeure

In addition to the cases listed in the general terms of agreement NL01, the simultaneous breakage of machines or dies as well as possible backup dies in a way that makes it impossible to fulfil the obligations based on the agreement in time is also considered a case of force majeure.

Other terms and conditions

In other respects, we follow the general terms of agreement NL01 regarding deliveries.
