

# **ALUMINIUM BUILDING SYSTEMS CLEANING AND MAINTENANCE**

## **FACADES, GLAZED ROOFS, DOORS AND WINDOWS**

### **CLEANING**

In order to keep aluminium surfaces presentable, they must be cleaned every six months. Surfaces that get dirty very easily, must be cleaned more often. Normal cleaning will be done with water and sponge.

For removing ingrained dirt can be used, for example warm water and detergent which pH value is 4-8. Finally, surfaces must be rinsed with clean water.

Never use rough sponges or detergents that have abrasive compounds .

### **MAINTENANCE**

Constructions must maintain regularly in order to ensure their proper function.

Proper opening and closing of opening windows must be checked.

If there will be problems and depending on their nature, next points must be checked:

- mounting and place of hinges
- sealings
- glazing blocks
- locking and other fittings

Next points must be checked regularly to ensure proper function of glazed roof and facades:

- sealings
- condense paths
- conditions of glasses
- ventilation holes
- glazing and cover beads
- flashings

If there will be problems, please contact to your construction supplier.

## CHECK REGULARLY
